Pro-lock Butterfly valve lockouts secure the handles of the valves and prevent them from being operated. Pro-lock valve lockouts are durable and will not rust or corrode as they are molded from polypropylene and contain only stainless steel internal parts. Ideally a butterfly valve handles will be supplied pre-drilled. If not pro-lock, only requires a 4mm hole to be drilled at a suitable point.

Pro-lock butterfly valve lockouts are available in red, green, and yellow for easy identification of the employees using the devices, the contents of the pipework being isolated, or whether the valve is locked open, closed or part of a wider isolation.
